Session IV

BAKOM NGN WS

05.09.2006

Will NGN be implemented in Switzerland in future and if so, to what extent?

- According to the answers we received, there is a certain insecurity at the operator side relating to NGN.
 - What are the reasons ?
 - What are the remedies ?

What are the end-customer benefits of NGN?

- It is not sufficient to change a system simply for changing the technology, the operators and customers need new services.
- Which are these new services (Digital Lifestyle)?

Do NGN encourage or discourage competition?

- The answers we received are mitigated, some operators think that there will be more competition, others think on the contrary that it will not be the case.
- Why ?
- What are the reasons ?

Expectations on the regulator

- An open dialogue with the regulator
- Let the market play but no regulatory holidays
- There are some concerns on the interconnection side: new interconnection services, new interfaces, new IC model
 - Will it really be the case ?
 - **What are the expectations on the regulator ?**

Conclusions of the workshop

- Let's specify together and orally the conclusions of the today discussions and presentations

Thank you very much for your collaboration and your attention !
