

Dear Mr. Jenny

SwissSign would very much appreciate a statement in the general introductory part of the BAKOM regulations indicating that the requirements as documented are minimum requirements and that a CA/RA may impose stricter rules and regulations and implement securer and better hard and software as it (and KPMG) seem fit.

This would enable a csp to react quickly to security problems that arise and allow a csp to keep its infrastructure a "modern" as possible. I am looking forward to some brief feedback from you on this issue.... Sincerely
