| Annex III: Fred | auency allo | cation ap | plication |
|-----------------|-------------|-----------|-----------|
|                 |             |           |           |

| Applicant: |      |      |      |      |      |      |      |         |     |      |
|------------|------|------|------|------|------|------|------|---------|-----|------|
| Applicant  | <br> | <br>••• | ••• | <br> |

A binding and irrevocable application is being made for blocks at the respective amount shown in the following table from the 700 MHz, 1400 MHz, 2600 MHz and 3500-3800 MHz bands.

| Bidding category /                              | Available frequency blocks | Block<br>size | Minimum bid per<br>block (CHF) | Eligibility<br>points<br>per block | Number of blocks applied for | Resulting eligibility = <#blocks applied for> x <eligibility block="" per="" points=""></eligibility> |
|---|----------------------------|---------------|--------------------------------|------------------------------------|------------------------------|---|
| Category A:<br>700 MHz FDD                      | 6                          | 2x5 MHz       | 16,800,000 (15<br>years)       | 2                                  |                              |   |
| Category B:<br>700 MHz SDL                      | 3                          | 1x5 MHz       | 4,200,000 (15<br>years)        | 1                                  | C                            |   |
| Category C1:<br>1400 MHz SDL,<br>lower sideband | 5                          | 1x5 MHz       | 4,200,000 (15<br>years)        | 1                                  | (A)                          |   |
| Category C2:<br>1400 MHz SDL,<br>core band      | 8                          | 1x5 MHz       | 4,200,000 (15<br>years)        | 1                                  |                              |   |
| Category C3:<br>1400 MHz SLD,<br>upper sideband | 5                          | 1x5 MHz       | 4,200,000 (15<br>years)        | 1                                  |                              |   |
| Category D:<br>2.6 GHz FDD                      | 1                          | 2x5 MHz       | 5,800,000 (10<br>years)        | 1                                  |                              |   |
| Category E:<br>3.6 GHz TDD                      | 15                         | 1x20 MHz      | 1,680,000 (15<br>years)        | 2                                  |                              |   |

## 1. Note

2. Total number of eligibility points

- a. Binding means that in the case of frequencies not being scarce in all the bands put out to tender (i.e. if the first stage of the auction does not take place), the applicant must accept unconditionally and irrevocably the frequency blocks it has applied for at the minimum price. If there is excess demand, the eligibility, i.e. the extent to which bids may be submitted in the auction, is determined on the basis of the information in this frequency allocation application (cf. auction rules in Annex II).
- b. In order to ensure competition in the national telecommunications market after the auction, the licensing authority has defined the following spectrum caps:
  - a maximum of three blocks in category A (i.e. a maximum of 2x15 MHz FDD spectrum in the 700 MHz band);
  - a maximum of five blocks across the categories B and C2 (i.e. a maximum of 25 MHz SDL spectrum in the 700 MHz band and in the 1400 MHz core band); and
  - a maximum of six blocks in category E (i.e. a maximum of 120 MHz TDD spectrum).

Furthermore, a cumulative bidding restriction is applied in the clock phase. This is not, however, applicable to the specification of the number of frequency blocks in this application.
